

draw.io for Confluence and JIRA Cloud Privacy Policy

This privacy policy describes how we treat your personal information and data when you use the draw.io for Confluence Cloud and/or the draw.io for JIRA cloud plugins, hereafter referred to as "the plugin". The draw.io plugins are the product of a partnership between JGraph Ltd and //SEIBERT/MEDIA. JGraph Ltd are responsible for the creation of the product and any automated emails generated from the Atlassian Sales API. JGraph Ltd and //SEIBERT /MEDIA are jointly responsible for ensuring this privacy policy is applied regarding the use of the plugin, but for simplicity this policy refers to us, being the joint vendors, as "JGraph".

Personal Information

No personal information, or information stored on the installation server(s) is made available to JGraph when you install the plugin on an Atlassian cloud instance.

Data

The plugin does not transmit from your server, nor from any client browser it runs on to any third-party with one exception. The universal search searches the built-in icons when a keyword is entered. After the list of local icons is exhausted, a query of that keyword is sent securely to www.draw.io and the icon results of that keyword returned. The query only contain the keyword as information, it contains no diagram information, nor any information about you or your system hosting Confluence.

Changes to Privacy Policy

JGraph Ltd may make changes to this privacy policy by giving 30 days notice of the changes on the www.jgraph.com website and on major social media accounts.
